Discovers and protects sensitive files in defence SMEs and simplifies compliance to regulations

GuardWare Protect is tailor-made to address defence SMEs' IT security challenges:

- Helps SMEs to conform to ISO27001:2013 certification and comply with DISP, ASD ISM, ITAR, NIST-800-171, and CMMC.
- Designed to operate with minimum technical support. You don't need an IT or security guru to run it.
- Affordable. Top security that doesn't break the bank.

A SIMPLE 3 STEP APPROACH TO SECURITY

DISCOVERS AND CLASSIFIES

ENCRYPTS AND PROTECTS

MONITORS AND ALERTS

Discovers and classifies files containing ITAR, CUI, defence classified data, tender information and intellectual property.

Sensitive files are automatically protected against breach and loss using defence grade encryption. This ensures files remain segregated and secure when stored, are only accessible by authorised users and when moved using any method like USBs, cloud drives, or emails.

Provides clear reports on where data is stored, who accessed it, the actions performed on it, how it was shared, and alerts in case of possible breaches.
